Mods

Here are the mods I have:

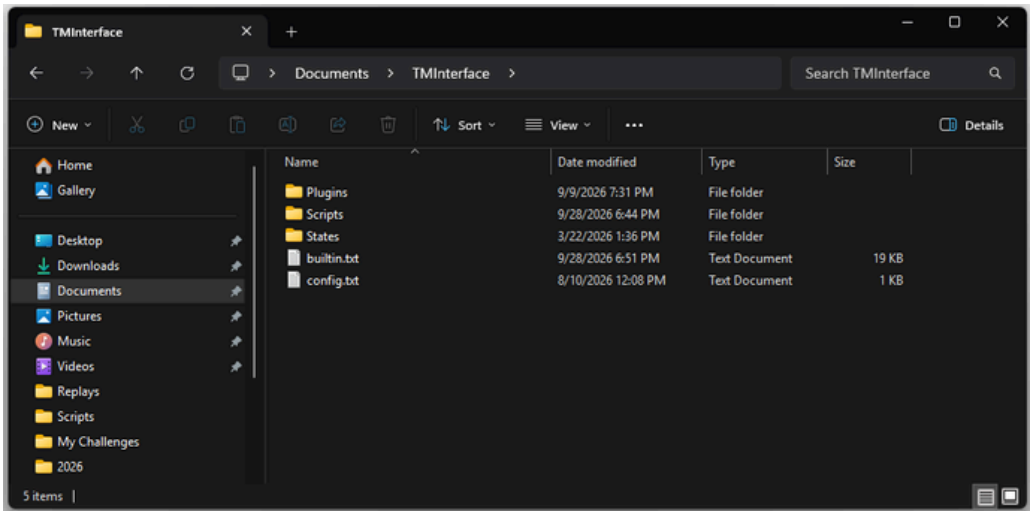

LouisMod (this is optional but it will be important when you get advanced)
Kim mod (makes bruteforce much faster)

your modloader should look something like this:

you can press that arrow to make a shortcut on your desktop

Plugins and config

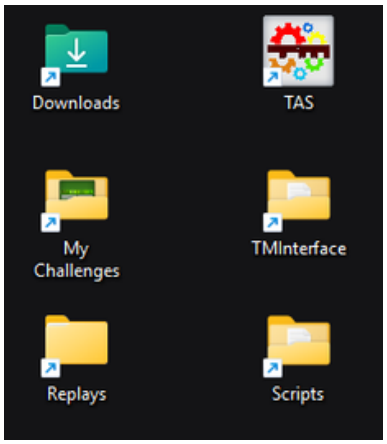

You can find the folders here

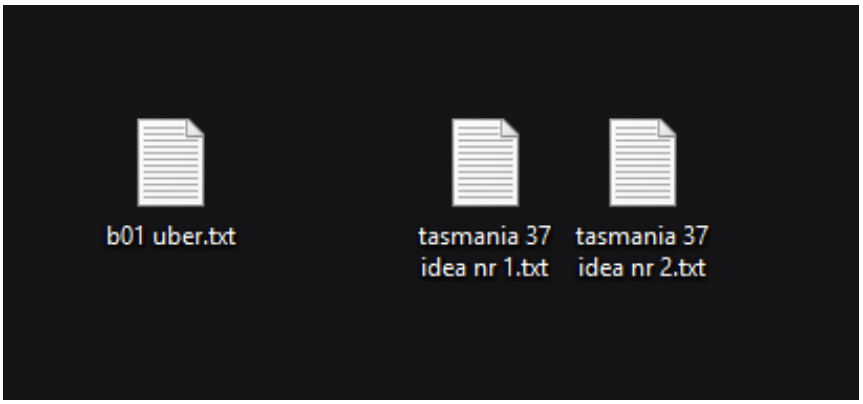

You can find my plugin and config files in the github:

[Rio help hub]

the *config.txt* contains my keybinds
message me on discord if you don't understand what they do (riotmf)

I have shortcuts for these folders on my desktop

You might have multiple ideas that you are working on

you can just drag the input files onto your desktop
